A step forward in precision screw targeting.

Introducing the Screw Targeting Clamp, a specialized instrument designed with advanced screw targeting capabilities for fusion or fracture applications.

With its unique design, this instrument provides the ability to maintain compression while inserting screws through targeted areas.

An adjustable rail helps to ensure ideal screw placement of solid or cannulated screws, ranging from sizes 3.5 mm through 7.3 mm.

Interchangeable ball-spike and Hohmann arms attach to the clamp to accommodate various anatomic areas and modes of compression.
Applications

Compression of fracture fragments or compression of bones for arthrodesis (e.g. subtalar arthrodesis, tibial plateau fracture, distal femur fracture, syndesmotic injury).

Allows for placement of solid or cannulated screws, sizes 3.5 mm through 7.3 mm, including:

- 3.5 mm Cannulated, 3.5 mm Low-Profile Cortex, and 3.5 mm Cortex
- 4.0 mm Cannulated and 4.0 mm Cortex
- 4.5 mm Headless Compression, 4.5 mm Cannulated, or 4.5 mm Cortex
- 6.5 mm Headless Compression, 6.5 mm Cannulated, or 6.5 mm Cancellous
- 7.0 mm Cannulated
- 7.3 mm Cannulated

Refer to the Screw Targeting Clamp Reference Guide for detailed instructions for use.
